BATHROOM ACCESSORIES & CARE COLLECTION

The Bathroom Accessories & Care Collection brochure consists of bathroom accessories and care products selected from our NOVA2 and QUADRA series.

All products are designed by Bønnelycke mdd, who, with a refined sense of simplicity, technical details and stylish fit, has managed to combine aesthetics and function into one, and created a range of quality products that will adorn any home.

Products from the NOVA2 series are recognised by consistent details such as the shadow edge between the mounting surface and the product complement the discreet and complete the NOVA2 collection of products. All elements are interpretations of the meeting between the stringent form, and the cylindrical form - this is quite apparent on the hooks for the system.

The proportional dimensions 8:5:3 define the products from the angular QUADRA series as architectural building elements. When combined, the clean-cut and stylistically consistent details form a characteristic and well-defined system.

Products in the Bathroom Accessories & Care Collection brochure are made from solid stainless steel grade AISI 304, and most of them available in the nine FROST finishes. The variety of finishes makes it easy to blend the products into any existing interior.

METHOD OF TESTING

To ensure that the CARE Collection is capable of withstanding heavy loads and conditions of every day use, the products have been tested in accordance to the requirements of the European standard for technical aids for disabled, BS/EN 12182:2012. We recommend all care products are installed on a solid wall. Reinforcement should always be used if the wall is not stable.

All tests are carried out on products mounted on a solid, concrete wall, thus we cannot guarantee the same performance and durability if this is not observed. For safety reasons, we recommend to check all bolt connections to ensure that no parts are loose and that all attachments to the wall are intact.

SEAT 1963 and ARM SUPPORT 1961

Implementing a safety factor of 1.5 the sample was subjected to a static proof load test with 150 kg, followed by a static overload test with 225 kg.

The sample withstood the static proof load and the static overload test without fracture or collapse.

GRAB RAILS 1965 and 1965-600

Implementing a safety factor of 1.5 the sample was subjected to a static load; vertical load 3.43 kN (350 kg) followed by a horizontal load of 5.89 kN (600 kg).

The sample withstood both the vertical and horizontal load without fracture or collapse.
